Claims

What is claimed is:

1. A method of controlling system traffic of a clustered computing environment, said method comprising:

    mapping one or more node addresses, for a service to be provided, to one or more network objects defined for said service;

    obtaining from said one or more network objects, one or more priorities of said service; and

    contacting said service based on said one or more priorities.

1   2.   A system of controlling system traffic of a

2 clustered computing environment, said system comprising:

3   means for mapping one or more node addresses, for

4 a service to be provided, to one or more network

5 objects defined for said service;

6   means for obtaining from said one or more network

7 objects, one or more priorities of said service; and

8   means for contacting said service based on said

9 one or more priorities.

1   3.   At least one program storage device readable by a
2   machine, tangibly embodying at least one program of
3   instructions executable by the machine to perform a method
4   of controlling system traffic of a clustered computing
5   environment, said method comprising:

6   mapping one or more node addresses, for a service
7   to be provided, to one or more network objects defined
8   for said service;

9   obtaining from said one or more network objects,
10   one or more priorities of said service; and

11   contacting said service based on said one or more
12   priorities.

                    *   *   *   *   *
